

I am a XM listener approaching 1 full year with them. XM is a valuable service that each member of my family enjoys. The variety and content offered is such that is simply not available on standard radio. My husband works in a remote area and prior to subscribing to XM, he was forced to listen to mostly static. We are paying for these services and just like cable tv, don't feel content should be dictated by the NAB. We would be happy to be in one of the areas that provide traffic and weather channels and look forward to when it is available here. it seems ridiculous that the NAB is fighting against XM instead of encouraging terrestrial stations to do a better job..... If local stations want me to listen to them, they will need to provide the kind of variety I want, not the kind of variety THEY want. Please reject the NAB's petition 04-160 and show them that change should come from within their own organization.

Thank you!
